Design by kaschkasch

In 2011, Florian Kallus and Sebastian Schneider started their own design studio. The duo focus their creative energy on product design & conceptual work. In co-operation with companies like Kusch+Co, they create classic modular furniture designs, characterised by a synthesis of innovation, functionality and aesthetics.

Variations

Sofa

Right at first glance, it encourages you to sit and relax! With the high side and back walls, it guarantees good acoustic comfort. The L-shape is inspired by the chaise longue, on which people used to sit or recline. Its exceptional form will make every space unique.

American Diner

A seating configuration that is superbly screened off for conversation privacy. It is reminiscent of the train compartments of yesteryear that inspired the cult of the typical American Diner restaurant. People can sit opposite one to another in a more intimate setting. Good for small groups and confidential conversations.

Landscape

How would you like to observe your surroundings? With seats facing in the same or opposite directions? In a linear, L-shaped or H-shaped configuration, with low or high walls, with or without a table top? Which one will be your favourite?

Variations

Landscape

Landscape

Pouffe freestanding / for integration

Characterised by a consistent cubistic design and comfortable, luxurious upholstery. As a freestanding seat, it offers an extra place for rest. As a pouffe for integration, together with the Creva upholstered table, it creates more extensive, eye-catching arrangements. Use the freestanding pouffe to arrange a space according to your personal preferences.

Variations

Upholstered table freestanding / for integration

This upholstered table with matching design aesthetics has just the right size to serve either as a part of a seating configuration or as a freestanding table. In both versions, everything you need is always at hand.

Design by Uwe Sommerlade

As the son of a civil engineer, he started designing his first houses and structures already as a child. In his grandfather's carpentry, he learned early on how to handle wood. After his graduation and the completion of his carpenter's apprenticeship, he studied design in Kassel. In 1992, he co-founded the company Lepper Schmidt Sommerlade. Since then, he has designed many acclaimed products for leading companies. Following the death of Christian Lepper, he founded his own studio in 2011.

Scorpii table

Not just a visual, but also a functional alternative. A square or rectangular table top, 18 mm thick, with a powder-coated metal base and self-levelling glides made of black plastic. The table is available in two heights: 35 cm and 45 cm. It is an excellent match for the Creva line.
