Olympia Hospital
by Haelvoet
Olympia combines simplicity, elegance and functionality in a highly ergonomic hospital bed.

The well-thought-out design is a welcome change in the world of hospital beds that is all too often characterised by complexity.
001 Mattress platform • For a comfortable lying position
You can choose between 3 different mattress platforms. The standard version is equipped with steel mattress platform profiles. The optional synthetic or solid laminate mattress platform sections (*) can be easily removed and withstand the common cleaning products.

002 Handset • Easy to use autonomously
Functional and easy to operate manually. The hand switch is equipped with all functions to put the patient in his desired seating, lying or reading position.

003 Bed panels • A harmonious duo
All head and foot panel types (Vela, Lauro, Jaro and Senso) can be easily removed or installed without needing any tools. The bed panels are standard equipped with bumpers that protect the entire bed during any movement.

004 Cases • Optimal care
The two cases at the head of the bed can be used to install an IV rod, a lifting pole or other accessories.

005 Sideguards (*) • Safety has no price
The Atmosphère sideguards protect the patient over 2/3 of the bed. The Trix sideguards can be telescopically extended and offer maximum patient protection over the entire bed length.

006 CPR lever (**)) • Central and within reach
Thanks to the CPR lever, you can manually put the backrest in a horizontal position. This lever is situated within your reach on both sides of the bed.

007 High/low system • Highly stable
The high/low supports guarantee an excellent bed stability at all heights. The bed can be easily adjusted between 38 cm and 78.5 cm (with castors ø 125 mm), which makes it easier to get in and out of the bed or to treat a patient.

008 Accessory holders • First-class functionality
Three multifunctional holders on both sides make it possible to install and use accessories very fast and easily.

009 Central brake (**)) • Activated with one single movement
Thanks to the accessible castor brake pedals, the Olympia bed considerably simplifies patient treatments by the nursing staff.

010 Castors • Superb maneuverability
Our extensive gamut of high-quality design castors guarantees a highly mobile and maneuverable bed.

011 5th castor (*) • Smooth maneuverability
The right option for small rooms or narrow passages.

012 Mini nurse box (**) or nurse box with blanket rack (*)
To switch off several electric bed functions selectively and to command them.

013 High/low pedal (*) • Staff-friendly
To quickly put the bed at its desired height without having to use your hands.

* option for Olympia I and Olympia II
** option for Olympia II and standard for Olympia I
Comfort for everyone

Nowadays, both the patient and nursing staff demand comfortable and ergonomic beds. Only then, the patient can be as autonomous as possible, whereas the nursing staff can work efficiently.

• Handset

The handset is user-friendly and easy to operate. It is equipped with clear and recognizable push buttons:

(Reverse) Trendelenburg position
The reverse Trendelenburg position can be activated by means of the handset, whereas the Trendelenburg position can only be used after the nursing function has been activated by means of the magnetic key.

Seating or relax position
Both the backrest and knee rest are inclined simultaneously. A Reverse Trendelenburg position is simultaneously activated when a relax position is chosen on the Olympia I hospital bed. The seating position relieves pressure on the heart and is the best position in case of intestinal complaints, respiratory problems and heart or lung diseases. This position is also recommended when the patient wants to eat, drink or read.

High position
The highest position of the bed is 78.5 cm (with castors ø 125 mm). The patient can be examined and treated without straining your back.

Low or sleeping position
The low bed position of 38 cm (with castors ø 125 mm) makes it easier for the patient to get in and out of the bed and reduces the risk of falling.

An illuminated hand switch is also available (*). This option is especially very useful at night, because the function buttons illuminate when touched.

• High/low pedal (*)

Thanks to the high/low pedal (*), you can put the bed at its desired height without having to use your hands. The tail protection bracket prevents unwanted manipulations.

• OpenBus intelligent control box

The OpenBus technology adds extra intelligence to the bed and its accessories. In the near future, OpenBus will also be able to register sensor data and pass this information to the nursing staff.

A discreet nightlight (*) under the bed makes sure that the patient can find his way in a dim room, without having to disturb the other patients or nursing staff. The nightlight is activated by means of the handset with selective locking system.

• Selective locking system (*)

The handset with selective locking system (*) makes it possible to lock the bed functions selectively by means of a magnetic key.

The advantages are:
- 1 central handset to operate and lock the bed functions.
- Efficient activation by means of the handset, without straining your back.

• Retracting backrest

While inclining the backrest upwards, the backrest is automatically moved backwards. By doing so, pressure is relieved on the pelvis, whereas the bedsore risk is reduced considerably. Thanks to an integrated safety in the retracting backrest, there is no opening between the sideguards and the mattress platform during the inclination. This prevents the patient of getting stuck. The backrest is also equipped with an inclination indicator.

• Under bed light (*)

A discreet nightlight (*) under the bed makes sure that the patient can find his way in a dim room, without having to disturb the other patients or nursing staff.

The nightlight is activated by means of the handset with selective locking system.

The advantages are:
- 1 central handset to operate and lock the bed functions.
- Efficient activation by means of the handset, without straining your back.

The nurse box (*) is situated at the foot of the bed, and is easily accessible for the nursing staff.

* option
Mobile and flexible

The daily use is made more comfortable, thanks to an easily movable and manoeuvrable bed.

• Central brake
   The foot of the Olympia bed is equipped with a design brake pedal on both sides (**). The pedal activates the 4 castors simultaneously, and can be put in 3 different positions. The red pedal activates the brake, whereas the green pedal deactivates it.

• Fifth castor
   The Olympia bed can also be equipped with a central fifth castor (*). This improves the maneuverability of the bed, especially in small and narrow rooms. Furthermore, the resilient qualities of the fifth castor absorb floor bumps and avoid brusque impacts when crossing thresholds.

• Integrated bed extension
   A hospital bed has to fulfill everybody’s wishes, irrespective of the length of the patient. The integrated bed extension makes it possible to extend the bed with 20 cm. When combined with the optional foot extension (**), a complete mattress platform functionality is guaranteed.

Safety galore

Our different sideguard types offer complete patient safety in each bed position. Each type has its specific advantages for both the user and patient. The choice is completely yours.

• Atmosphère sideguards (*) offer complete patient safety in each bed position. The sideguards constitute one unit and can be lowered by means of an easy locking mechanism.

• Atmosphère sideguards (*) with 4 siderails
   4 siderails make it possible to use mattresses with a thickness up to 22 cm.

• Trix sideguards (*)
   The Trix sideguards (*) consist of three side rails, offering maximum patient safety over the entire bed length. The sideguards can only be lowered by using your both hands. This safety system has been developed to prevent the sideguards from being lowered unintentionally. An integrated telescopic system makes sure that the Trix sideguards - even when the bed is extended - cover the bed sides over the entire length.

1 directional castor
   This castor makes it easier to move the bed in a straight line.

4 braked castors

4 unbraked castors
   This position makes it possible to move the bed in all directions.

The daily use is made more comfortable, thanks to an easily movable and manoeuvrable bed.

• Central brake
   The foot of the Olympia bed is equipped with a design brake pedal on both sides (**). The pedal activates the 4 castors simultaneously, and can be put in 3 different positions. The red pedal activates the brake, whereas the green pedal deactivates it.

• Fifth castor
   The Olympia bed can also be equipped with a central fifth castor (*). This improves the maneuverability of the bed, especially in small and narrow rooms. Furthermore, the resilient qualities of the fifth castor absorb floor bumps and avoid brusque impacts when crossing thresholds.

   This castor makes it easier to move the bed in a straight line.

4 braked castors

4 unbraked castors
   This position makes it possible to move the bed in all directions.
User-friendly

The actuators of the Olympia bed are installed centrally under the mattress platform. As a result, the number of cables is reduced considerably, so that this bed can be maintained very easily.

• A minimum of maintenance

Haelvoet only uses maintenance-free actuators and electric systems. Furthermore, the actuators can be replaced without needing any tools.

• Easy to clean

The mattress platform can be cleaned very efficiently, thanks to the standard rounded steel mattress platform profiles. The Olympia bed is optionally available with removable, perforated synthetic panels that have integrated mattress holders. Thanks to their sophisticated design and fluent removability, the mattress platform sections can be cleaned very quickly.
Creative design

The Olympia bed structure makes it possible to choose between 4 different panel types: Vela, Lauro, Jaro and Senzo. Each type has been developed with an eye for details and clear linear patterns. All panel types can be easily removed. Thanks to the extensive standard colour gamut, you can integrate this bed perfectly in the interior of your institution. Special colours and patterns are available on request.

• Bed panels

Type 1: Vela
The standard bed panel Vela is made of a metal bracket and a solid laminate insert panel. The bracket can be optionally chromed.

Type 2: Lauro (*)
The bed panel Lauro (*) is made of a synthetic frame and a solid laminate insert panel. The Lauro panel is standard equipped with a locking mechanism.

Type 3: Jaro (*)
The bed panel Jaro (*) is made of an aluminium frame and a solid laminate panel. It can only be combined with the Trix sideguards. The panel is also standard equipped with a locking mechanism.

Type 4: Senzo (*)
The wooden bed panel Senzo (*) is made of solid oven-dried beech and a metal bracket. The bracket can be optionally chromed.

Finishing and quality

Melamine, HPL and solid laminate
A whole range of uni colours and wood patterns helps you to integrate the Olympia bed perfectly in your institution. The Haelvoet laminate collection has a strong impact strength and withstands scratches, light and damp. All laminate types are made in accordance with the norms DIN 53419 and EN 438.

Wood structure

Both the bed panels and the bedside tables can be finished with these colours.

Other solutions for your interior decoration are possible on request.
## Lit Olympia I

### Summary

- **Electric protection class I**
  The bed is earthed via the mains cable. The advantages are:
  - a bigger ESD (Electrostatic Discharge) immunity.
  - a drop in the electromagnetic field.

- **Dimensions and performances**
  (standard bed)
  - width: 100 cm, length: 212 cm;
  - height variation of the mattress platform: ± 38 cm - ± 78.5 cm with castors Ø 125 mm;
  - clearance height: L: 170 mm, R: 135 mm;
  - safe working load: 230 kg;
  - weight (without accessories): 125 kg;
  - mattress dimensions: 195 x 85 cm, thickness: 12 to 22 cm (*).
  *The mattress thickness depends on the type of sideguards

- **Electric protection class I**
